Experience

Software Engineer, AlphaPoint – Remote — Sept 2022 – Feb 2024

- Refactored and added new functionality to an application that provides liquidity to rising crypto exchanges with thousands of end users
- Designed REST and Websocket APIs to increase efficiency and speed from the previous WinForms design
- Integrated with third-party APIs to expand data sources and variety of liquidity
- Incorporated tools such as Grafana and InfluxDB to improve monitoring to decrease incident response time
- Redesigned backend data schemas for improved data storage for compliance, operations and accounting purposes
- Collaborated with product managers and other engineers to translate business requirements into reliable technical solutions

Associate Software Engineer, Chicago Trading Company – Chicago, IL — April 2021 – Mar 2022

- Constructed full-stack features for high traffic applications which reduced operational burden and outtrade risk
- Coordinated multiple teams and vendors to build FINRA Consolidated Audit Trail application approaching 0% error rate and outperforming industry error rate fivefold
- Architected compliance long-term file storage framework which guaranteed future ease of accessibility as well as reliable audit WORM storage
- Stood up new FIX messaging stream for an intraday trade reconciliation application

Software Engineering Intern, Chicago Trading Company – Chicago, IL — July 2020 – Sept 2020

- Wrote new feature in the Fitting team's primary tool to calculate and display diffs between fits
- Used agile methodology to coordinate with traders and the Fitting team to determine requirements and scope of work

S&P Clerk, Chicago Trading Company – Chicago, IL — April 2019 – April 2021

- Trading operations
- Full-stack side project

Trading Assistant, Prime Trading – Chicago, IL — June 2014 – Jan 2019
